

# How to view Plat of Surveys

Updated by MCLIO on May 12, 2016

1. Search for or zoom to your area of interest using any of the search tools or map controls.

2. Open the Layers panel by finding the “stacked paper” icon at bottom left or left carrot arrow at the top left of the map panel.

3. Click the Checkbox that says **Surveying** and also the one below that says **Plat of Survey**. IF there is a plat for your area of interest, the polygon will appear on the map in dark blue showing its location.

4. Click the map within the polygon you'd like to retrieve a plat for. A 'map tip' will appear at top left and show you the documents and addresses that pertain to that location. Wait a moment; sometimes the address may appear right away while the document query is still working.
