

# Free Memory Screening

Get screened for early signs of memory loss

## Are you concerned about your memory?

As we get older, it is important to recognize any changes we may experience, especially in relation to our memory. A memory screen is defined as a wellness tool that helps identify possible changes in memory and cognition. This is not a diagnostic tool, but a screen that can provide early detection for dementia.

## How does a memory screen work?

The memory screen is very simple. You will be asked to answer some questions and complete a task. The memory screen is at no cost. The screen takes about 15 minutes.

**When:** Thursday June 23rd 2022
